

LEED BUILDING COUNCIL**COMPLIANCE
INFORMATION****ProKRETE**

Please find information regarding the ProKRETE Cementitious Urethane products for possible LEED credits for your project.

LEED 2009 V3

Waste Management ProKRETE containers are recycled/recyclable HDPE or recycled/recyclable paper and corrugated and therefore are easily recycled with waste management programs. Only the amount of material that is required for the installation is mixed and placed which eliminates excess product generated waste. This may contribute to earning points for LEED MR Credit 2.1 & 2.2: Construction Waste Management.

Regional Material used for ProKRETE are manufactured in Rocky Hill Hartford, CT. This may contribute to earning points for LEED MR Credit 5.1 & 5.2 points: Regional Materials and Manufactured Regionally.

Rapidly Renewable Material – ProKRETE resins contain material derived from castor beans. This may contribute to earning points for LEED MR Credit 6.

Low-Emitting Material – The materials used in the ProKRETE systems meet the required VOC requirements and therefore could contribute to LEED EQ Credit 4.2 & 4.3: Low-Emitting Materials.

Do not hesitate to contact me if you need any more information.
